## FDM Thermoplastic Filament

The information presented are typical values intended for reference and comparison purposes only.  
They should not be used for design specifications or quality control purposes.

## Overview

Antero™ 840CN03 is a PEKK-based FDM thermoplastic combining the excellent physical and mechanical qualities of PEKK with electrostatic dissipative (ESD) properties. The material is filled 3% by weight with carbon nanotubes.

As a high-performance polymer, Antero 840CN03 exhibits exceptional chemical and wear resistance, ultra-low outgassing properties and consistent ESD performance. ESD values range from  $10^4$  –  $10^9$  ohms per square inch. This makes the material particularly suitable for space and industrial applications where these qualities are critical.

# Mechanical Properties

Samples were printed with a 0.010 in. (0.254 mm) layer height. For the full test procedure please see the [Stratasys Materials Test Procedure on www.stratasys.com](http://www.stratasys.com) (immediate download upon clicking the link).

## Print Orientation

Parts created using FDM are anisotropic as a result of the printing process. Below is a reference of the different orientations used to characterize the material.

## Tensile Curves

Due to the anisotropic nature of FDM, tensile curves look different depending on orientation. Below is a guide of the two types of curves seen when printing tensile samples and what reported values mean.

**A** = Tensile at break, elongation at break (no yield point)

**B** = Tensile at yield, elongation at yield

**C** = Tensile at break, elongation at break

## ESD Properties

Antero 840CN03 was tested per ANSI ESD S20.20, S11.11, STM11.12 to determine the effect that build parameters and part geometries had on ESD properties. Different geometries printed in different orientations all fall into the ESD safe range ( $10^4$  to  $10^9$  ohms). For full details, see the [Antero 840CN03 ESD White Paper](#).

## Flame, Smoke, and Toxicity (Fortus 450mc)

Antero840CN03 was printed with a T20F tip on the Stratasys Fortus 450mc and tested per 14 CFR 25.853, BSS 7238 and 7238, and AITM 2.0007B, and 3.0005. The testing done establishes that this material, samples 0.040 inches thick unless otherwise noted, **meets requirements** for:

- 60s and 12s Vertical Burn
- 15s Horizontal Burn
- Toxic Gas Emission
- Smoke Density
- Heat Release Rate of Cabin Materials
