

## Making Innovation Work Within The Startup Community

PADT takes pride in our efforts to grow various technology startups and help them make the transition into becoming industry leaders in their respective fields.

One such company that PADT has helped to seamlessly make such a transition is World View, a company that is pioneering a new frontier at the edge of space, and leading the way in the emerging stratospheric economy.

As an active, full-service commercial launch provider, World View's technology is continually opening up new realms of possibility for commercial customers around the world.

World View uses ANSYS software for structural analysis and optimization of their Stratollite flight platform, which enables previously unthinkable applications at a fraction of the cost of existing technology.

These crafts serve a variety of mission functions and a broad range of critical commercial needs and applications.

In regard to their work with PADT, World View had this to say:

“World View has been working closely with PADT for years, and we continue to be highly impressed with their unwavering level of expertise and support. They’ve been instrumental in helping us ensure that World View Stratollites are designed to withstand the rigors of launching into, flying through, and coming back from the Stratosphere. I highly recommend their services, and applaud them for continually going the extra mile for our business as we aim to pioneer routine access to near-space.”

- Sebastian Padilla, Chief Engineer, World View
